Dear Colleagues,

Since creation in 1998, MVZ Martinsried in the south-west of Munich has continually expanded in expertise and competence. Initially, MVZ Martinsried was focused exclusively on human genetic and immunogenetic investigations. The portfolio has been expanded gradually to other diagnostic and clinical sectors in line with genome-based, fully integrated diagnostics, since interdisciplinary teamwork allows clinical questions to be solved more efficiently, more comprehensively and more individually. Our credo: Precise therapy decisions require precise, modern diagnostics!

Service is important to us!

- Daily routine and emergency laboratory medicine diagnostics
- Fast sample processing
- Urgent/pathological results configured individually by telephone or fax if required
- Direct contact to physicians and scientists
- Personal consultation and answers to frequently asked questions from experienced field/sales representatives
- Free, interdisciplinary further education and seminars: “Work and Diagnose!”
- Laboratory order forms and practice profiles
- Practice management system and practice management options
- Electronic order entry (subject to specific technical requirements)
- Laboratory group (LG) membership available for basic laboratory M II
- Laboratory consumables, regional courier service and nationwide sample logistics

The largest increase in biomedical knowledge in the last 20 years has come from genome research. Today, in the age where individual genome analyzes are feasible, the question of meaningful medical classification and the interpretation of the huge amounts of data is of increasing importance. In addition to bioinformatic algorithms, phenotype, morphology and biochemistry play an increasingly important role in the filtering of large data sets.

The numerous new therapeutic approaches of "Precision Medicine" also require "Precision Diagnostics". For the diagnostician, this can only mean the intelligent correlation of data from as many analytically accessible compartments as possible in order to answer even complex questions. As a specialist medical-led laboratory, MVZ Martinsried offers a comprehensive range of parameters from all areas of laboratory diagnostics.

The specialist Department of Human Genetics offers clinical consultation/genetic counseling and has access to multiple specialized departments within the framework of genetic laboratory diagnostics: molecular genetics, neurogenetics, pharmacogenetics, nutrigenetics, metabolic genetics/genetics of metabolism, cytogenetics, reproductive genetics /genetics of reproduction, molecular oncology and immunogenetics.

Our services
- Genetic counseling
- Special consultations:
  - Prenatal diagnostics
  - Childhood developmental disorders
  - Preimplantation diagnostics (approved PID center)
  - Connective tissue diseases
- Family relationship analyses
  - Arrhythmogenic diseases and more
  - Therapists
  - Therapy support
  - Microbiome analysis (enteralis T m - ebiom)
  - Next Generation Sequencing (NGS)
- Histopathologie/Immunhistologie
  - Myocardial biopsy
  - Leukemia and lymphoma diagnostics
  - Solid tumors, biopsy material
  - Companion diagnostics
  - Liquid biopsy / liquid profiling
- Metabolite analysis
  - Carbohydrate and lipid metabolism analytes
  - Urine diagnostics
- Microbiological-virological routine diagnostics (serological, cultural, molecular biology)
- High resolution resistance testing (Hepatitis viruses, HIV)
- Microbiome analysis (enteralis T m - ebiom)
- Next Generation Sequencing (NGS)
- Companion diagnostics
- Liquid biopsy / liquid profiling
- Immunohistology
  - Myocardial biopsy
  - Leukemia and lymphoma diagnostics
  - Solid tumors, biopsy material
  - Companion diagnostics
  - Liquid biopsy / liquid profiling

Quality is important to us!
In order to ensure the continuous quality of analyses, we regularly and successfully participate in external quality control of various national and international ring trials. For examination methods for which no interlaboratory comparison is available, alternative methods ensure quality. Our services are accredited according to DIN EN ISO 15189 and 17025.
